Authorization for this Examiner's amendment was given in a telephone interview with Harold Brown on Mach 6, 2009 and March 16, 2009.

Claims

Please replace claims 1 and 33 of the Supplemental Response of February 26, 2009. The underlined and strike through portions are provided to indicated the language added and removed from the Supplemental Response.

1. A mechanically deployable, expandable and collapsible structure, comprising:

at least one scissor assembly comprising a first and a second strut, the first and the second strut each having first and second ends and being pivotably attached to each other such that the scissor assembly is movable between a folded position, in which the first end of the first strut and the second end of the second strut are substantially adjacent, and an expanded position;

a first spacer disposed between the first end of the first strut and the first end of the second strut when the scissor assembly is in the expanded position, the first spacer

comprising a rigid element having a fixed length between a first end proximate the first end of the first strut and a second end proximate the first end of the second strut;

a second spacer disposed between the second end of the first strut and the second end of the second strut when the scissor assembly is in the expanded position; and

a tension member connected to the first and second struts, wherein the tension member is arranged such that the scissor assembly is moved from the folded position when there is slack in the tension member to the expanded position when the slack in the tension member is taken up, the first and second spacers each include tubular members, and the tension member extends longitudinally through at least part of the first ~~and second~~ spacers between the first end and the second end of the first spacer.

33. A method of deploying a mechanically deployable structure, comprising:

unfolding the structure to a collapsed condition, the structure including at least one scissor assembly comprising a first and a second strut, the first and the second strut each having first and second ends and being pivotably attached to each other such that the scissor assembly is movable between a folded position, in which the first end of the first strut and the second end of the second strut are substantially adjacent, and an expanded position; and

when the structure is in a collapsed condition, taking up slack in a tension member, the tension member being connected to the first and second struts in such a

manner that taking up slack draws the first ends of the first and second struts toward one another, and wherein slack in the tension member is taken up until the first ends of the first and second struts are separated by a predetermined distance defined by a rigid spacer, the rigid spacer including a first end and a second end and a tubular member, the tension member extending longitudinally through at least part of the rigid spacer between the first end and the second end of the rigid spacer.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

3. According to the interview on February 18, 2009 it was agreed that amending independent claims 1 and 33 to include the limitations of claim 16 would render the application allowable. Applicant then filed a supplemental amendment on 2/26/2009 that included the above changes. In taking a final review, the Examiner noted that the supplemental amendment claims that included the limitations of claim 16 did not define the claims over Esser et al. (Figure 8f). The Examiner then contacted the Applicant's representative to conduct an Examiner's amendment to amend the claims to clearly define the invention over Esser et al.

Independent claims 1 and 33 have been amended to clearly define the invention over the closest prior art, Esser et al. In addition to the previous limitations in the claims, the language now defines the tension member extending longitudinally (i.e. along the

length) and through (i.e. inside) at least part of the spacer. This is not disclosed or taught in Esser et al., as Figure 8 of Esser et al. discloses a tension member that extends perpendicular to the length of a member, and results in a different function. This included language now clearly defines the invention over the Esser et al. reference. Furthermore, the claimed limitations would not be obvious over Esser et al. as the invention is now structurally and functionally different. Therefore, the claims of the present application are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
